

Digital Music Production Bridging Work

Music and sound surround our lives. This constant musical soundtrack is supported by sounds on our phones, crashes and explosions in games and to tell us of the arrival of a message or a newsflash. Sounds punctuate our activities and helps us to realise actions need to be taken, for example to warn us when it is safe to cross the road or that someone wishes to talk to us when the phone rings.

Challenge 1

Create a Foley portfolio using just your mobile phone for recording sound.

You must keep your recordings ready to show in September.

Challenge 2

Write or voice record your explanation of the following sounds

- *diegetic and non-diegetic sound*
- *effects, actions, button clicks and rollover sounds*

Challenge 3

Play and record a song/piece that would best suit an advert intended for Christmas shoppers.
